

## Product Stewardship Summary

**Effective date:** 1 September 2019

**Supersedes:** 12 December 2018

### Dimethylformamide

#### General Statement

Dimethylformamide is a colorless organic solvent that is used in the synthesis of organic compounds and acts as a catalyst in carboxylation reactions. Dimethylformamide is a low to moderate hazard material and the risk of adverse health effects associated with both occupational and consumer use of this chemical is anticipated to be low to moderate.

Dimethylformamide is used in industrial settings only and will not be present within consumer products.

When handled responsibly within industrial settings, the potential for exposure and subsequent risk can be minimized, allowing dimethylformamide to be used safely.

#### Chemical Identity

Name: Dimethylformamide

Brand Names: Not applicable

Chemical name (IUPAC): N,N Dimethylmethanamide

CAS number(s): 68-12-2

EC number: 200-679-5

Molecular formula: C<sub>3</sub>H<sub>7</sub>NO

Structure:

# Product Stewardship Summary

## Uses and Applications

Dimethylformamide is used as an industrial solvent and in the production of fibers, films, and surface coatings. It is also used as a solvent in the production of polyethane-coated textiles and synthetic fibers.

## Physical/Chemical Properties

### Phys/Chem Safety Assessment

Property	Value
Form	Colorless liquid
Physical state	Liquid
Color	Clear / colorless
Odor	Amine-like
Density	0.951 g/cm <sup>3</sup> @ 20°C
Melting / boiling point	-61 / 153 °C @ 101.325 kPa
Flammability	No data available
Explosive properties	No data available
Self-ignition temperature	445°C
Vapor pressure	3.77 hPa @ 20°C
Mol weight	73.09 g/mol
Water solubility	Completely miscible
Flash point	58°C
Octanol-water partition coefficient (Log <sub>k<sub>ow</sub></sub> )	-1.01

## Exposure, Hazard and Safety Assessment

The following section describes possible exposure scenarios and hazards associated with dimethylformamide. The exposure assessment describes both the amount of and the frequency with which a chemical substance reaches a person, a population of people, or the environment. Hazard refers to the inherent properties of a substance that make it capable of causing harm to human health or the environment. The safety assessment reports the possibility of a harmful event arising from exposure to a chemical or physical agent under specific conditions. Just because a substance may possess potentially harmful properties does not mean that it automatically poses a risk. It is not possible to make that determination without understanding the exposure.

### Human Health Effects

### Human Exposure Assessment

**Consumer:** Dimethylformamide is used in industrial settings only. Therefore, consumer exposure is unlikely.

# Product Stewardship Summary

**Worker:** In industrial settings, dimethylformamide is manufactured and handled in closed processes as much as possible, which ensures that worker exposure is minimized. When there is potential for exposure, such as during loading, unloading, sampling or maintenance operations, exposure to dimethylformamide can be further minimized by the proper use of personal protective equipment.

## Human Hazard Assessment:

Dimethylformamide has moderate acute toxicity if inhaled, low acute toxicity if ingested and no acute toxicity if applied on skin. It is not a skin irritant or skin sensitizer but can cause serious eye irritation. It is not classified as a carcinogen and is not associated with mutagenicity or genotoxicity. Prolonged or repeated exposure is not expected to damage internal systems or organs. Dimethylformamide is not considered to be toxic to fertility, however, it may damage unborn children.

Effect Assessment	Result
Acute Toxicity Oral / inhalation / dermal	Low acute toxicity if ingested. Moderate acute toxicity if inhaled. No acute toxicity if applied on skin. Acute exposure may damage liver.
Irritation / corrosion Skin / eye / respiratory test	Not irritating to skin. Causes serious eye irritation. Does not cause respiratory irritation.
Sensitization	Does not cause allergic reactions up on contact with skin
Toxicity after repeated exposure Oral / inhalation / dermal	Prolonged or repeated exposure is not anticipated to damage internal systems or organs
Genotoxicity / Mutagenicity	Does not affect genetic system
Carcinogenicity	Not considered as carcinogen
Toxicity for reproduction	Not toxic to fertility. However, may damage the unborn child.

## Human Health Safety Assessment

**Consumer:** Dimethylformamide is used in industrial settings only and will not be present at appreciable concentrations within consumer products. Therefore, consumer exposure and subsequent risk is unlikely.

**Worker:** In industrial settings, dimethylformamide is manufactured and handled primarily in closed processes which limit exposure. Based on the implementation of good manufacturing processes and industrial hygiene practices, the occupational health risk associated with dimethylformamide is anticipated to be low.

# Product Stewardship Summary

## Environmental Effects

### Environmental Exposures

Dimethylformamide can be released to the environment during manufacturing of the substance, when it is used for formulating into mixtures or when used as an intermediate in industrial settings. The most likely pathway for dimethylformamide to be released to the environment would occur during its use as a non-reactive processing aid at industrial sites.

### Environmental Hazard Assessment

Dimethylformamide is readily biodegradable and has low potential for bioaccumulation. Based on its physical and chemical properties, dimethylformamide is expected to have very high mobility in soil and will not adsorb to suspended solids and sediment in the aquatic environment. Volatilization from water surfaces is not expected. Dimethylformamide has a potential for volatilization from dry surfaces.

Effect Assessment	Result
Aquatic Toxicity	Not toxic to aquatic life

Fate and behavior	Result
Biodegradation	Readily biodegradable
Bioaccumulation potential	Not potentially bioaccumulative (log Kow = -1.01)
PBT / vPvB conclusion	This substance is not considered to be persistent, bioaccumulating and toxic (PBT) or very persistent and very bioaccumulating (vPvB)

### Environmental Safety Assessment

Dimethylformamide is not toxic to aquatic life, is readily biodegradable and has a low potential for bioaccumulation. Based on the available data, dimethylformamide is associated with a low risk for adverse effects in the aquatic environment.

### Risk Management Recommendations

Exposure to dimethylformamide in the workplace can be controlled by sufficient ventilation, proper handling and storage techniques, and the use of appropriate personal protective equipment as recommended in the SDS for this substance.

# Product Stewardship Summary

A selection of occupational exposure limits is below.

- OSHA: 8-hr TWA 10 ppm – skin designation
- NIOSH: 10-hr TWA 10 ppm – skin designation
- ACGIH: 8-hr TWA 10ppm – skin designation

## Regulatory Information / Classification and Labeling

Under the Globally Harmonized System for classification and labeling (GHS), substances are classified according to their physical, health, and environmental hazards. The hazards are communicated via specific labels and the (Extended) SDS. GHS attempts to standardize hazard communication so that the intended audience (workers, consumers, transport workers, and emergency responders) can better understand the hazards of the chemicals in use.

### GHS Classification:

Flammable liquids - Category 3  
Acute toxicity (Oral) - Category 5  
Acute toxicity (Inhalation) - Category 3  
Serious eye damage/eye irritation - Category 2A  
Reproductive toxicity - Category 1B

### Hazard Statements:

H226: Flammable liquid and vapour.  
H303: May be harmful if swallowed.  
H319: Causes serious eye irritation.  
H331: Toxic if inhaled.  
H360D: May damage the unborn child.

### Signal Word: Danger

### Precautionary Statements:

P201: Obtain special instructions before use.  
P202: Do not handle until all safety precautions have been read and understood.  
P210: Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.  
P233: Keep container tightly closed.  
P240: Ground and bond container and receiving equipment.

# Product Stewardship Summary

P241: Use explosion-proof electrical/ ventilating/ lighting equipment.

P242: Use non-sparking tools.

P243: Take action to prevent static discharges.

P261: Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray.

P264: Wash skin thoroughly after handling.

P271: Use only outdoors or in a well-ventilated area.

P280: Wear protective gloves/ protective clothing/ eye protection/ face protection.

## Hazard Pictograms:

## Conclusion

Dimethylformamide is a useful industrial solvent and chemical intermediate. Dimethylformamide is used in industrial settings only and will not be present within consumer products. When handled responsibly within industrial settings, the potential for exposure and subsequent risk can be minimized, allowing dimethylformamide to be used safely.
