

GENDER PAY REPORTING

INEOS Infrastructure (Grangemouth) Ltd

March 2023

Gender Pay Report 2022

Ineos Infrastructure (Grangemouth) Ltd

INEOS Infrastructure (Grangemouth) Ltd (IIGL) operates on one of the largest industrial complexes in Scotland. The site has a long history of innovation and development. It has benefitted from recent investments by INEOS, designed to ensure the preservation of sustainable UK/ Scottish manufacturing and the high value jobs that our operations support, both directly and indirectly.

These investments continue as we deliver on our road map and focus on a just transition to Net Zero manufacturing operations by 2045. And this is vital because our products are used as the building blocks in a multitude of applications which both enable and enhance many aspects of modern life today. These raw materials are transformed into housing and construction materials, cabling and insulation, automotive components, fibres and textiles, food packaging as well as being extensively used in the pharmaceutical and healthcare industry. In the drive for a sustainable future that will benefit all, our products help other sectors to reduce their carbon footprints too: 'lightweighting' materials and vehicles, longer shelf-lives and reducing food waste for example.

We aim to establish and maintain a working environment where all employees are treated fairly and equally, ensuring equal opportunities for all. Skills Development is high on our 'agenda' with opportunities for current colleagues to grow their skills and experiences through focussed training and career opportunities, whatever their role and position in the organisation, resulting in secure and fulfilling careers. We value our employees and appreciate the benefits of having an inclusive and diverse workforce.

Under UK Legislation businesses with more than 250 employees are required to publish data about their gender pay gap.

The regulations require us to report on: -

Mean gender pay gap	The difference between the mean hourly rate of pay of male full-pay relevant employees and that of female full-pay relevant employees
Median gender pay gap	The difference between the median hourly rate of pay of male full-pay relevant employees and that of female full-pay relevant employees
Mean bonus gap	The difference between the mean bonus pay paid to male relevant employees and that paid to female relevant employees
Median bonus gap	The difference between the median bonus pay paid to male relevant employees and that paid to female relevant employees
Bonus proportions	The proportions of male and female relevant employees who were paid bonus pay during the relevant period
Quartile pay bands	The proportions of male and female full-pay relevant employees in the lower, lower middle, upper middle and upper quartile pay bands

This report is based on a data as of April 2020, looking at hourly pay as defined in the regulations. This includes base pay, allowances and any bonuses paid in the 12 months ending the 4th April 2020.

Demographics

261 Employees

Pay

The gender pay gap relates to differences in average male and female pay within the organisation. It does not compare pay received by men and women doing the same or similar work, this is known as equal pay. Our technician pay structure and our robust job evaluation process provide us with a disciplined framework with which to evaluate roles and to group employees within our salary ranges providing a non-discriminatory pay system.

Difference between gross hourly earnings	
Mean	Median
3.86%	-0.05%

Our evaluation, indicates that the difference in average pay is a due primarily to having proportionately more men than women in senior, higher paid roles.

Pay Quartiles

The proportion of male and females in each base pay quartile is shown below.

Quartile	Male	Female
Upper	90.77%	9.23%
Upper Middle	96.92%	3.08%
Lower Middle	100%	0%
Lower Quartile	89.23%	10.77%

Women make up 6% of our employees but are under-represented in all the quartiles. The upper quartile and upper middle groups are primarily occupied with management and senior engineering positions. This will be an area of focus for the future, but it is likely to take some time for any changes to take effect.

This spread is consistent with many other businesses in our sector, particularly those businesses associated with Science, Technology, Engineering and Mathematics (STEM) where there are proportionately fewer women entering the sector at graduate level.

Bonus

Proportion of Staff receiving a bonus	
Male	Female
75.71%	68.75%

Difference between Bonus Pay	
Mean	Median
10.12%	4.51%

As with pay, the bonus mean is heavily influenced and reflective by the fact that the majority of senior graded staff are male and employees who are eligible for a bonus have the opportunity to sacrifice into their pension as part of our HMRC approved bonus sacrifice scheme.

Going Forward

As an organisation we are confident that our existing policies regarding recruitment, reward, maternity and flexible working already contribute to our ability to attract and retain women within our organisation.

We have a long tradition of working with local schools to promote and encourage the take up of STEM curriculum subjects. We continue to actively support and host events that enable pupils to meet and interact with positive female role models in our industry. We are keen to support our local College's network for female engineers, working in partnership with them to champion the achievements of female engineers and highlight the opportunities available.

Declaration

I confirm that our data has been calculated according to the requirements of the **Equality Act 2010** (Gender Pay Gap Information) Regulations 2017.
Stuart Collings, CEO

Declaration

I confirm that our data has been calculated according to the requirements of the **Equality Act 2010** (Gender Pay Gap Information) Regulations 2017.
Terry Banham, HR Director
