

LOGISTICS SAFETY COMMUNICATION

Protective measures for drivers against Coronavirus

February 2020

Some important hygienic precautions protecting your drivers and the people at the loading and discharge sites:

- Regular hand washing!
- Avoid close contact with other people: handshaking, etc.
- Bring in your cabin a bottle of hand sterilizing liquid and use it often, particularly before and after registering at the reception desk and loading.
- Provide your drivers with protective and adequate masks to carry in their cabin. They could be asked to use them at the collection or delivery site.
- Provide your drivers with latex gloves. They could be asked to use them at the collection or delivery site.
- Carefully follow the instructions from the site.

Symptoms of coronavirus (Covid-19)

If your drivers may have been in close contact with infected individuals or groups, they should be monitored carefully, as specified by the guidelines issued by local authorities.

Shortness of breath
breathing difficulties

Virus seems to start with a **fever**, followed by a **dry cough** and then, after a week, leads to **shortness of breath** and some patients needing hospital treatment
